

Double Side Stepper Card - A4

Instructions:

Print out both sheets of this project.

With the back of the A4 card uppermost, slide the diagram from page 2 alongside & use the measurements to plot the positions of the lines on back of your card.

Once you have completed the measurements, refer to the diagram & score the perforated lines indicated in the diagram, being careful not to extend past the red lines other than across the 14.8 cm central fold line.

Using a craft knife, cutting mat & metal ruler cut through both lines indicated in red on the diagram.

Turn your card so the right side is uppermost & beginning with one of the perforated lines marked in blue on the diagram, fold back so that the wrong sides of the card face one another. This is called a mountain fold.

On the next line do the opposite, so right sides of the card face each other. This is called a valley fold.

Carry on alternating these two folds until you have creased all of the scored lines on one side of the card.

Complete the opposite side to match the first.

Fold the central line on the right of the card in a mountain fold.

This can be a bit confusing at first, so if at any point you do come unstuck, use the photo for guidance.

If you do not succeed the first time, don't worry - after all it is only a piece of card, throw it away & try again.

Decorate as you wish.
