

Extended Z Fold

What you will need to recreate this project:

- 1 sheet A4 card
- 2 x 7.2 x 14.5cm embossed panels of above card
- Tacky glue & 3D pads
- Card scraps, dies & machine to make embellishments to decorate your project.

Assembling the project:

This is a really easy card base to produce & in my case very addictive to play around with as there are just so many combinations!

Okay, so if you have a score board place the card horizontally across & score the centre line at 14.8cm & the bi-fold line at 7.4cm, or measure & mark these score lines manually.

To make the square shaped sample in the photograph I scored & folded the lines to create a Z card & then used my guillotine to crop the bottom 6cm off, but you can unfold the card & crop this manually just as easily, then I cut that strip in half to form 2 x 3cm wide strips.

Flip the strips over so the longest part of the z fold is uppermost (see diagram above) & butt the first fold line up to the bi fold line on your folded base card (see diagram below where the orange line is the base card & the black line one of the strips).

I positioned the top strip 2cm down from the top of the card & the second 2cm up from the bottom & secured them both to the base card using Tacky glue. Add 3D pads to both embossed panels & position one centrally on the front flap of the card, covering the ends of the strips, & the down the leading edge of the inside back of the card.

Above is how the inside of your card will look once you have added the embossed panels.

I decorated the example with die cut flowers & panels, the largest scalloped circle die at the back is a Spellbinders, the lace panel layered on to that was created from a background die, cutting out the circle & then adding a frame, the main frilly flower is a die set by Prima, & the smaller flowers was a cover gift die on a craft magazine a while ago.
