

DIY Action Wobbler Springs

What you will need to make these fun 3D attachments for your embellishments:

Strips of scrap card
*Double sided adhesive tape the match the width of your card scraps
2.5cm/1" circular punch
Pencil or other round slender object to form the springs
Floristry wire
Cutter for wire
Dense foam pad
Pokey tool

* Or you could completely cover a sheet of card with a sheet of double sided adhesive.

Cover one side of your card strips with the double sided tape & then punch out as many circles using the punch as the scrap of card allows.

Using the dense foam pad & pokey tool push a hole through each of the cut circles, these need to

be between the edge & the centre of the circle, & not as you would assume actually in the centre itself.

Now you need to wrap your wire around the pencil to form the springs, bearing in mind you want the spring to compress in order to fit into an envelope I recommend that you only wrap the wire four times around the pencil & then trim it off. One coil at each end will be used in the construction leaving you three remaining coils for the bounce affect.

Now carefully peel back half of the carrier paper from the adhesive side & feed one end of the spring through the hole you made earlier, you may find it easier with the help of some tweezers to pull it through to the adhesive side.

When one full coil is through to the adhesive side align this in the centre of the circle, trying to touch the adhesive as little as possible, again tweezers may help here.

Flatten the coil against the adhesive & cover again with the carrier paper & press firmly. Repeat to attach the other end of the spring to another circle.

The circles can easily be trimmed to fit smaller embellishments, but you may need to add more adhesive to their sticky surfaces to fix them securely.

You can easily make larger & smaller versions of the wobblers depending on your requirements.
